
CONSULTANTS & CONTRACTORS FILE 2021

CIWEM

FLOODRE

Have you been affected by flooding?

Flood Re is a government backed, not-for-profit scheme that makes insurance more affordable for homes damaged by flooding.

So, if you don't have home insurance or are looking to renew a policy, it's not too late to shop around for the right deal for you.

Simply visit www.floodre.co.uk
for help and advice on buying flood insurance

Welcome to CIWEM's 2021 consultants and contractors file

I SEE AN OPTIMISTIC present and future for the companies in this consultants and contractors file. As 2021 beckons, it would be easy not to share this optimism. Events of recent months have disrupted peoples' lives, businesses and the economy and the future still looks quite uncertain.

However, the companies listed here all have one thing in common: the services they deliver have never been more relevant or more needed. This reflects the imperative to mitigate and adapt and become resilient to the impacts of a changed and changing climate and to help the natural world to recover.

This file presents the companies bringing solutions to the greatest challenges humanity has ever faced. The companies listed in the CIWEM suppliers' file wish to demonstrate their commitment to sustainability, to delivering professional excellence.

By choosing to appear here, they declare openly that they align themselves with CIWEM's mission. That mission is to grow a community of people dedicated to sustainable management of water and the environment and to meeting our climate and ecological challenges.

We are achieving this by aligning ourselves with the very best organisations, represented here. Each company's contribution to our mission is two-fold. First, to deliver the highest standard of professionalism and services, placing the principles of sustainability at the core of delivery.

CIWEM exists to support this by encouraging the very best talent into the water and environment sector, supporting their professional development and recognising excellence through professional registration, including chartership.

The second contribution is to strive for sustainable, low-carbon operations as a business. In 2019, many organisations declared a climate emergency and started to set targets for low-carbon operations. This shows great leadership – now we must deliver on those promises.

The process has also revealed which sectors of business and industry are lagging behind. In its 2019 progress report to government, the Committee on Climate Change noted that 12 out of 33 sectors, including areas of agriculture and health, had no plans for long-term climate change.

Organisations that align themselves to CIWEM's mission have much to teach the wider business community. I hope you find this directory interesting and helpful. It points you towards the companies that are leading by example, that have the skills to resolve the challenges we are facing.

Above all, I hope you are inspired by what these companies do and the way they do it.

Terry Fuller is chief executive of CIWEM

KEY: SECTORS OF WORK

ARDENT CONSULTING ENGINEERS LTD We provide advice to developers and Local Government on flood risk, air quality, noise, transport and infrastructure. For Local Government we provide flood risk services, from policy advice, initial appraisal, design and implementation of flood schemes. We work from initial advice, preliminary/ detail design, planning and site supervision during construction.

ATKINS Atkins business is one of the world's most respected design, engineering and project management consultancies. As a global fully integrated professional services and project management company, we help our clients plan, design and enable critical infrastructure projects, and provide expert consultancy that covers the full project lifecycle. Our breadth of capability is the core of our strength and we bring our global expertise together to deliver solutions to local challenges, putting resilience, sustainability and productivity are the core of everything we do.

Drawing on our diverse global expertise in the water sector we focus on delivering faster, smarter and more reliable outcomes for our clients. With a detailed understanding of the key challenges facing the industry around leakages, improving asset management and performance and providing a better service to customers, we provide solutions that utilise the latest digital technologies, supported by our market leading consultancy services to deliver real added value at all stages of the value chain.

Focusing on our client needs and complex industry challenges has led us to take a systems approach and collaborate with partners to develop a series of service line value propositions that are designed to deliver better customer outcomes.

BMT BMT is a specialist maritime and water engineering and environmental consultancy providing expert advice and guidance to industry, commerce, policy makers, regulators and public sector operators. Our environment consultancy services cover the whole project life cycle from concept and feasibility through to decommissioning.

BMT's services include: Climate risk, resilience and adaptation; Meteocean analysis and data provision; Investment and financial advice; Approvals, compliance, permitting and consenting advice; Environmental assessments; Flood and coastal erosion risk management and modelling; Urban water cycle solutions; Aquaculture advice and modelling; Water quality and sedimentation including hydrodynamic, dispersion and particulates modelling; Ecology; Marine Conservation and ecosystems management; Waste management; Underwater noise; Oil spill modelling and impact assessment; Due diligence; Emergency Response Planning; and GIS, web and data development.

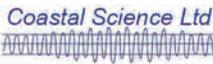

Flood Modelling: BMT is the specialist environmental consultancy behind the world-renowned software suite, **TUFLOW**. TUFLOW's unparalleled 1D/2D dynamic linking capabilities, robustness, stability, speed and wide-ranging functionality arguably make it the world's most powerful and fastest 1D/2D hydrodynamic computational engine available. An in-house team of experienced TUFLOW modellers work with our clients and partners to ensure robust, calibrated and validated models to aid decision making and management. TUFLOW is used for flood risk assessments, forecasting and mapping; catchment modelling; infrastructure design; urban drainage and surface water modelling; coastal modelling including tsunami modelling; and sediment modelling.

CROWDER CONSULTING We are one of a kind in the global water industry, having been at the leading edge of developing innovative consultancy, data and field services solutions for water network management for over 30 years. Our focus is the support of our UK and International water operator clients with advanced solutions and high-quality services for their network management, leakage and NRW reduction initiatives.

Our flagship Netbase System is a data rich hub that acts as a Digital Twin of our client water operators' networks, with a suite of best practice applications providing source to tap insights for network monitoring, operation, optimisation, management and regulatory reporting. Our Netbase Digital Services Platform extends the value and insights of the Netbase data Hub, providing advanced web-based technologies and solutions supporting advanced analytics, operational, field services and leakage activities. Our Data Science team have extended our data analytics of smart meters, area monitors and fast logging data for household and non-household consumptions to support our clients' regulatory commitments. Our advanced analytics also cover pressure management, leakage reporting, strategic analytics and targeting as Digital Services offerings.

Our Field Services capability has expanded to support our clients in leakage detection and network verification for both trunk mains and distribution mains. Through a combination of innovative processes and technologies, our end-to-end approach to trunk main flow balances, operability analysis, follow up investigations and leakage targeting, based on the Netbase NetConn application has enabled us to exceed our performance requirements.

We are supporting a standard approach to building and maintaining hydraulic models in water industry modelling software using the Netbase HM Manager application.

GOLDER ASSOCIATES Golder is a global engineering and environmental consultancy with over 60 years' experience, employing over 7,500 people and operating in more than 40 countries, including a strong presence in the UK and Irish market. We work with our clients to understand their challenges, collaborate with them to develop a shared vision of success and deliver integrated, innovative and sustainable solutions.

In the UK, Golder has a proven track record of working across the public and private sectors and with investors, providing specialist strategic advice and design support in policy, infrastructure, power (including nuclear), extractive industries, and manufacturing. Our geographic location in the Golder network, means we are ideally placed to service clients and projects in the UK & Ireland, Europe, Africa and Asia, and draw upon specialist services from our overseas offices.

Our expertise lies in civil (subsurface) and ground engineering, water resource and flood risk management, environmental, waste management, and strategic planning. We thrive on new challenges and are able to service the rapidly adjusting marketplace by offering highly specialised digital transformation, zero carbon and climate change resilient solutions to enhance the sustainability, health, safety, and environmental performance of our clients and their projects, whether dealing with legacy issues, operational matters or future mitigations.

Golder is a wholly employee owned business, able to invest strongly in its people and technologies, to deliver the highest possible standards of consultancy and engineering. As one of largest and most successful organisations of its kind, and the investment in our highly skilled service offering, we are a dependable and reliable partner, and our clients are assured of the best possible solutions.

M'cLOY CONSULTING LIMITED is an award-winning Water and Environmental Consultancy. We specialise in flood risk management, contaminated land, water resources and civil engineering design; implementing nature-based solutions where viable. Our extensive experience ensures we provide solutions which traditional design approaches can often miss. This innovative approach is fundamental to our success delivering climate resilient, healthy and socially integrated schemes which our client base across local authorities, public and private sectors value.

- Our services include:**
- Flood risk and drainage assessment
 - Strategic surface water management plans
 - Integrated catchment modelling and urban drainage flood modelling
 - Environmental improvement, public amenity and greenway design
 - Detailed design for construction with project lifecycle support
 - Groundwater and hydrogeology services
 - PRA, GQRA and DQRAs
 - Industry training in relation to Sustainable Drainage Systems (SuDS)
 - Client representation and project management services

Our success lies in our commitment to deliver you the most cost effective and sustainable solution.

TURNOVER 2019: –

ORACLE ENVIRONMENTAL EXPERTS Oracle Environmental Experts (OEE) core strength is in the assessment and mitigation of environmental impacts, risks and liabilities associated with pollution incidents and historically contaminated land.

The expertise within OEE provides a focal point for companies requiring technical advice and support, particularly with respect to the mitigation and assessment of risks to human health and the water environment.

Our services cover all aspects of land contamination, including pollution incidents involving impacts to soils, water and air, pollution incident response, oil spill forensics, assessment of risks to human health and the water environment, and the investigation and remediation of contaminated soils and waters.

We continually invest in research and development of new equipment seeking innovative ways to address contaminated soils and water. For example, our rapidly deployable Mobile Treatment Unit, has been developed to allow us to effectively recover oil from groundwater and surface water following inland oil spills, to have complete control and containment once set up, and most importantly to recover oil efficiently and continuously.

We have also developed in-house remediation systems for in-situ soil remediation using techniques including soil vapour extraction, chemical oxidation and bioremediation. Our groundwater remediation systems and experience includes rapidly deployable oil-water recovery systems, air sparging, vacuum enhanced NAPL recovery, dual phase extraction, surfactant flushing and recovery, chemical oxidation and passive/reactive barriers.

We are a highly respected independent company founded on technical expertise and on the passion and commitment of our staff.

TURNOVER 2019: £4.4M

TERRENUS LAND & WATER LTD Over the last 20-years Terrenus Land & Water have provided skilled, professional services to offer a comprehensive range of services for land development purposes.

Specialising in contaminated land and geotechnical investigations, flood risk and Sustainable Drainage (SuDS) design Terrenus supports all stages of the Planning process, from pre-acquisition to detailed planning and can provide services from plot level to Masterplan assessment. Terrenus staff are also experienced in the identification and treatment of Invasive Species as well as soil and mine gas assessment. Our aim is to reduce the cost and time constraints to our client's development projects.

For contaminated land risk assessment, we seek to reduce risk and front-end costs, whilst providing robust engineering solutions and reducing or eliminating the need for removal of materials from site. Through gas and groundwater monitoring, gas protection measures and validation are provided.

Terrenus has extensive experience in geo-technical engineering including long term settlement and slope stability analysis for road and building works. With the adoption of powerful software and innovative geo-technical solutions we have been able to save time and cost for large-scale and small-scale projects as well as bespoke cost-effective foundation design.

With geology at the core of our practice, Terrenus can undertake Coal Mining Risk Assessments (CMRA), consultancy and supervision services for mine stabilisation works, including mine shaft capping. Terrenus also facilitate the application and approval of Coal Authority Licenses. Rock face stability can also be undertaken.

Terrenus is skilled in assessing the water environment through hydrological and hydraulic assessments. Coastal, Fluvial, Pluvial and groundwater assessments can be undertaken as desktop studies, outline hydraulic modelling or detailed hydraulic modelling in 1D, 2D or combined 1D/2D scenarios. SuDS assessments and design can also be undertaken as well as Controlled Activity Regulations (CAR) application.
